

# Schedule properties

You can find these properties when [creating \(or editing\) a schedule](#) for your roster.

 Create schedule form

| Property<br>(* required) | Description                                                  |
|--------------------------|--------------------------------------------------------------|
| Name *                   | The name of the schedule. Usually the name of the staff.     |
| Role                     | A label for indicating the role of the staff.                |
| Preparation time *       | The time required to prepare after waking from a main sleep. |
