

Duty limit section properties

You can find these properties under the [Administrator Settings](#) tab in the Settings screen.

Property	Description
Duties in system	The total number of duties held by this instance of the application.
Limit	The total number of duties this instance of the application can hold. If you want to increase this limit, contact us at info@frmssc.com.  If the number of duties in this instance has reached the instance limit, you will not be able to process new duties. You could delete old duties or archive them as a workaround, if you would like to continue processing new duties without increasing the instance limit. However, archived duties can't be analysed or processed.
